

Athlete-Coach data sharing – Howto?

Sharing data between a coach and one or multiple athletes training at different locations, is one of the main functions of the Artemis Coached upgrade. This article shows the steps to setup the device-to-device syncing of data. Both athlete and coach need to perform steps on their devices. Please do them in the order below. The initial steps are for both athlete and coach. Then the athlete steps are indicated in **Artemis-green** and the coach steps are indicated in **Artemis-blue** but first both have to login to their Google accounts.

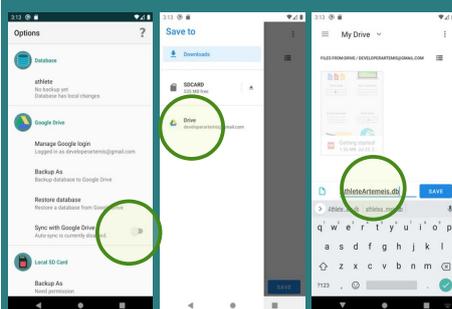

1) Both Athlete and Coach need to login into their Google Accounts.

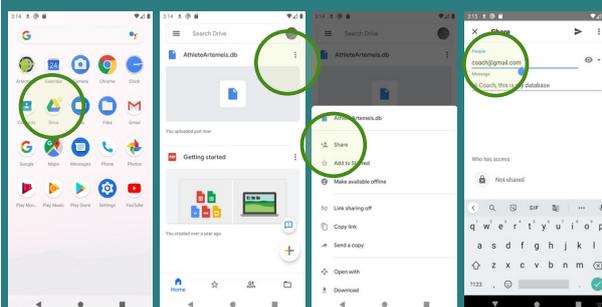

- Go to 'Settings'.
 - Select option 'Database'.
 - Select option Manage 'Google login'
-
- The image on the left, shows that the athlete/coach is not logged in yet.
 - Click sign in, and sign into your account.
 - On the right, the Athlete/Coach is signed in.
 - Back in 'Database Settings', it now shows that the athlete/coach is signed in.

3) On Athlete-device - athlete needs to setup the database-sync with the coach.

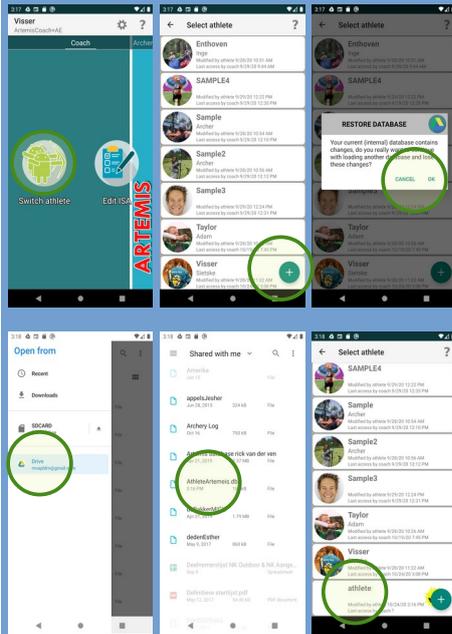

- Go to the 'Database settings' again, and click 'Sync'.
- Select your Google Drive and select an appropriate folder to store your database file.
- Type a name to identify your database file. Pro-tip: Have your Athlete name their database; LASTNAMEFirstname.db This makes it easier for the coach to track individual athletes.
- A dialog will appear when saving (and setting up the sync) was successful.

4) On Athlete-device - athlete gives permission to coach

- Select the Google Drive app on your device (or desktop in a browser).
- Find your Artemis database (the one you saved in step 3) and click the three vertical dots button to the top-right of the file.
- Click share.
- Share the database file with your coach (through its google mail account).

5) On Coach-device - coach to load/switch Athlete database

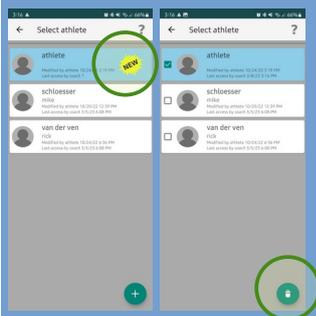

- Add the athlete to the coaches list of athletes.
- Press the '+'.
• This dialog appears because if the current loaded database has changes but wasn't saved. You can either choose 'cancel' and first save the local database, or just disregard this dialog and load your athletes database ('ok')
- **Note that loading an athlete's database will wipe your local/own database!!!**
- Find your athlete's database in your Google Drive 'Shared files'.
- Found it!
- Once selected, your athlete appears in your athlete list and the coach can click to load the database.
- **Once loaded, the coach can look through the athlete's data and use all Artemis functions to analyse it.**

6) On Athlete-device - athlete to sync data when database is changed

- Every time the athlete adds training data or changes anything, a small symbol appear in the topbar.
- Click this symbol to upload (and re-sync) your data with your coach
- A dialog shows a successful re-sync

7) On Coach-device – NEW data will be shown after a while

- It might take up to a day, but the coach will see a 'NEW' symbol whenever the athlete has uploaded new data. Even if the symbol is not there, clicking the athlete will load the latest version.
- To remove an athlete's linked database, long select it and click remove. The link is removed (you can always add it again)

Troubleshooting

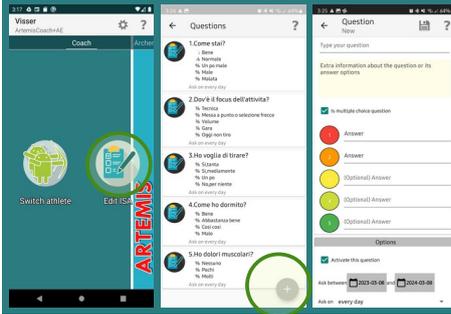

If the coach gets an error loading the data of an athlete (a dialog with various authorization failures) there is a work-around. The reason for the error is due to the very strict (but also often changing) privacy policies on sharing Google Drive files. The permission an athlete has given the coach to read/view the data is sometimes withdrawn. If this happens, loading an athlete's database fails with a dialog. The coach has to remove the link (see step 7) and add it again (see step 5).

Edit ISA

On the coach tab there is also a button called 'Edit ISA' to edit or add new ISA or self-reflection questions. The Athlete needs to enter those questions in their own database (on their device) themselves, then upload (re-sync) the database. As a coach you can only view (or read) the database of your athlete, you cannot modify it.

Setup ISA/Self-Reflection questions

8) On Athlete-device - athlete to click 'Edit ISA'

- Click 'Edit ISA' and create the questions in close cooperation with your coach and/or the technical staff.
- An example is shown on the next screenshot. Click '+' to add a new question
- An empty question
- Find more info on ISA / self-reflection questions and their use on the [FAQ-page](#)

ArtemisLite – Premium - Coached

Artemis is the World's #1 Archery Scoring and Analysis App for your Android™ phone or tablet. It is the only App for the serious archer and coach that will help you in improving your archery game. Used by thousands of archers and coaches world-wide, it has a long track-record helping archers become the best they can. You can download a free version in the [Google Play store](#).
